#### 1. General Description

The LC260WX2 is a Color Active Matrix Liquid Crystal Display with an integral External Electrode Fluorescent Lamp(EEFL) backlight system. The matrix employs a-Si Thin Film Transistor as the active element. It is a transmissive type display operating in the normally black mode. This TFT-LCD has a 26.0 inch diagonally measured active display area with WXGA resolution (768 vertical by 1366 horizontal pixel array). Each pixel is divided into Red,Green and Blue sub-pixels or dots which are arranged in vertical stripes. Gray scale or the luminance of the sub-pixel color is determined with a 8-bit gray scale signal for each dot, thus, presenting a palette of more than 16,7M(True) colors. The LC260WX2 has been designed to apply the LVDS interface. It is intended to support LCD TV, PC TV where high brightness, super wide viewing angle, high color gamut, high color depth, and fast response time are important.

#### **General Features**

Figure 1. Block diagram

| Active screen size     | 26.005 inches(660.53mm) diagonal                               |
|------------------------|--|
| Outline Dimension      | 626(H) x 373(V) x 47.1(D) mm(Typ.)                             |
| Pixel Pitch            | 140.5 um x 421.5 um x RGB                                      |
| Pixel Format           | 1366 horizontal by 768 vertical pixels. RGB stripe arrangement |
| Interface              | LVDS 1port   |
| Color depth            | 8-bit, 16,777,216 colors                                       |
| Luminance, white       | 450 cd/m <sup>2</sup> ( Center 1 point, Typ. )                 |
| Viewing Angle (CR>10)  | Viewing Angle Free(R/L 178(Typ.), U/D 178(Typ.))               |
| Power Consumption      | 3.37W(logic), 75W(Backlight [VBR-A=1.65V] )                    |
| Weight                 | 4,300g(Typ.)   |
| Display operating mode | Transmissive mode, normally black                              |
| Surface treatments     | Hard coating (3H), Anti-glare treatment of the front polarizer |

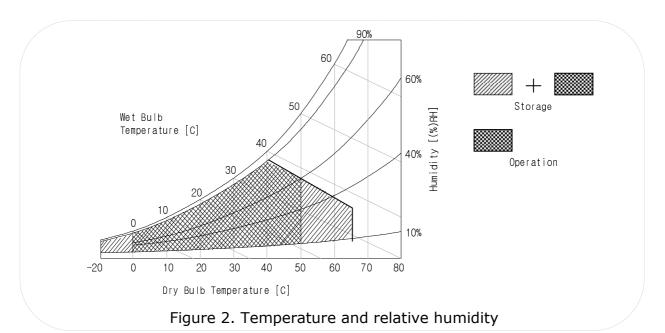

#### 2. Absolute Maximum Ratings

Table 1. Absolute Maximum Ratings

| Parameter                     | Cymbol       | Va   | lue  | Unit  | Note           |  |

| Storage Humidity              | Нѕт          | 10   | 90   | %RH   | 1              |  |

- 1. Temperature and relative humidity range are shown in the figure below. Wet bulb temperature should be 39 ℃ Max, and no condensation.
- 2. Abnormal visual problems by panel front side surface temperature can be occurred in specific range (60  $^{\circ}$ C  $^{\circ}$ C), But materials(ex : polarizer) are not damaged permanently in this range, TSUR.
- 3. Ambient illuminance should be more than 10 lux.

#### 3. Electrical Specifications

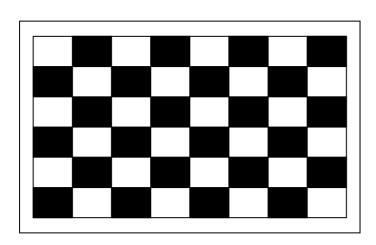

The LC260WX2 requires two power inputs. One is employed to power the LCD electronics and to drive the TFT array and liquid crystal. The second input power for the EEFL/Backlight, is to power the inverter.

#### 3-1. Electrical Characteristics

Table 2. Electrical Characteristics

| Parameter                               | Symbol            |      | Value | Unit | Note  |       |
|---|-------------------|------|-------|------|-------|-------|
| i diameter                              | Cymbol            | Min  | Тур   | Max  | Offic | 14010 |
| 1. Power for Panel:                     |                   |      |       |      |       |       |

| Fower Supply Input Current              |                   | -    | 339   | 440  | mA    | 2     |
| Power Consumption                       | P <sub>LCD</sub>  | -    | 3.37  | 4.38 | Watt  | 1     |
| Inrush Current (V <sub>LCD</sub> Input) | I <sub>RUSH</sub> | -    | -     | 3    | А     | 3     |

- The specified current and power consumption are under the V<sub>LCD</sub>=12V, 25 °C, fV(frame frequency)=60Hz condition.
   Typical supply current is measured at the condition of 8 X 6 Mosaic pattern(white & black) shown in the [ Figure 3 ] is displayed.
- 2. The current is specified at the maximum current pattern.
- 3. The duration of rush current is about 2ms and rising time of power input is 1ms(min).

[Figure 3] Mosaic pattern

| Life Time                           |                   |        | VBR-<br>A(0V~3.3V) | 50,000 |         |         | Hrs   | 4                |

- 1. Electrical characteristics are determined after the unit has been 'ON' and stable for approximately 120 minutes at 25± 2 °C. The specified current and power consumption are under the typical supply Input voltage 24V and Vbr 1.65V, it is total power consumption.
  - The ripple voltage of the power supply input voltage is under 0.5 Vp-p. LPL recommend Input Voltage is  $24.0V \pm 5\%$ .
- 2. Electrical characteristics are determined within 30 minutes at 25± 2 ℃. The specified currents are under the typical supply Input voltage 24V.
- 3. LPL recommend that the PWM freq. is synchronized with three times harmonic of Vsync signal of system.
- 4. Specified Values are for a single lamp which is aligned horizontally. The life time is determined as the time which luminance of the lamp is 50% compared to that of initial value at the typical/ maximum lamp current on condition of continuous operating at 25 ± 2 ℃
- 5. The duration of rush current is about 5ms.

#### 3-2. Interface Connections

This LCD employs two kinds of interface connections. A 30 pin connector is used for LCD electronics and a 12pin connector is used for the integral backlight system.

#### 3-2-1. Signal Interface

The LCD connector(CN1): FI-X30SSL-HF (Manufactured by JAE) or Equivalent.

The pin configuration for the 30 pin connector is shown in the table below.

Table 4. 30Pin Connector pin configuration (For LCD Panel)

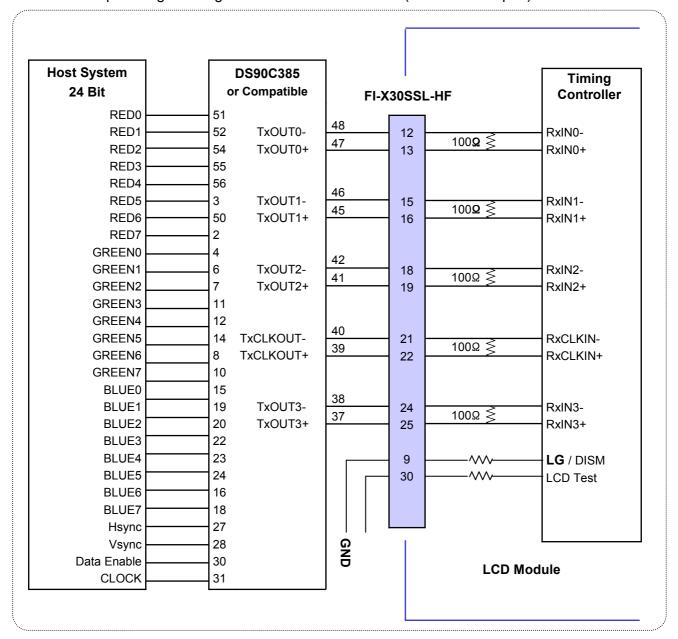

| Pin | Signal assignment      | Note | Pin | Signal assignment  | Note |
|-----|------------------------|------|-----|--|------|
| 1   | V <sub>LCD</sub> (12V) |      | 16  | LVDS SIGNAL CHANNEL 1+                                       |      |
| 2   | V <sub>LCD</sub> (12V) |      | 17  | GND  |      |
| 3   | V <sub>LCD</sub> (12V) |      | 18  | LVDS SIGNAL CHANNEL 2-                                       |      |
| 4   | V <sub>LCD</sub> (12V) |      | 19  | LVDS SIGNAL CHANNEL 2+                                       |      |
| 5   | GND                    |      | 20  | GND  |      |
| 6   | GND                    |      | 21  | LVDS CLOCK C-  |      |
| 7   | GND                    |      | 22  | LVDS CLOCK C+  |      |
| 8   | GND                    |      | 23  | GND  |      |
| 9   | Select                 | 1    | 24  | LVDS SIGNAL CHANNEL 3-                                       |      |
| 10  | GND                    |      | 25  | LVDS SIGNAL CHANNEL 3+                                       |      |
| 11  | GND                    |      | 26  | GND  |      |
| 12  | LVDS SIGNAL CHANNEL 0- |      | 27  | VBR_OUT(VBR output from LCD Module)                          | 2    |
| 13  | LVDS SIGNAL CHANNEL 0+ |      | 28  | VBR_EXT<br>(External VBR input from System to<br>LCD Module) | 2    |
| 14  | GND                    |      | 29  | GND  |      |
| 15  | LVDS SIGNAL CHANNEL 1- |      | 30  | AGP  | 6    |

- 1. If pin9 is ground, interface format is "LG", and if pin9 is 3.3V, interface format is "DISM. (See page 9~10)
- 2. If DCR function not use, this pins must be OPEN.
- 3. All GND(ground) pins should be connected together and should also be connected to the LCD's metal frame.
- 4. All power input pins should be connected together.
- 5. Input level of LVDS signal is based on the IEA664 standard.
- 6. If pin30 is 3.3V, no-signal is AGP pattern, and if pin30 is ground, no-signal is Black pattern

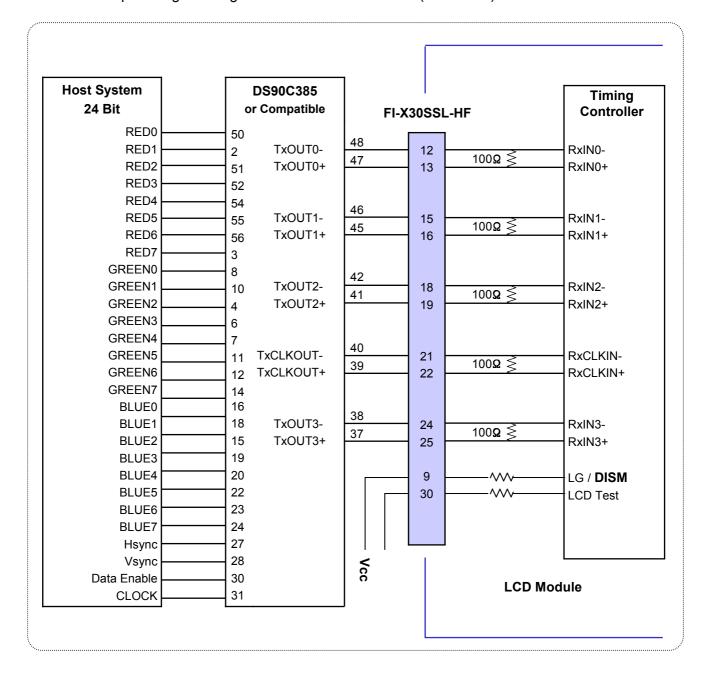

Table 5. Required signal assignment for LVDS transmitter (Pin9 = "L" or open)

- 1. The LCD module uses a 100  $Ohm(\Omega)$  resistor between positive and negative lines of each receiver input.
- 2. Refer to LVDS transmitter data sheet for detail descriptions. (DS90C385 or Compatible)
- 3. '7' means MSB and '0' means LSB at R,G,B pixel data.

Table 6. Required signal assignment for LVDS transmitter (Pin9 = "H")

- 1. The LCD module uses a 100  $Ohm(\Omega)$  resistor between positive and negative lines of each receiver input.
- 2. Refer to LVDS transmitter data sheet for detail descriptions. (DS90C385 or Compatible)
- 3. '7' means MSB and '0' means LSB at R,G,B pixel data.

#### 3-2-2. Backlight Inverter

Input CNT

-Inverter Connector: S14B-PH-SMC

(manufactured by JST) or Equivalent

- Mating Connector : PHR-14 or Equivalent

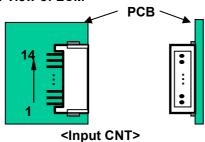

**Table 7. INVERTER CONNECTOR PIN CONFIGULATION** 

| Pin No | Symbol   | Description                                       | Master       | Slave      | Note                                  |
|--------|----------|---|--------------|------------|---------------------------------------|
| 1      | VBL      | Power Supply +24.0V                               | VBL          | VBL        |                                       |
| 2      | VBL      | Power Supply +24.0V                               | VBL          | VBL        |                                       |
| 3      | VBL      | Power Supply +24.0V                               | VBL          | VBL        |                                       |
| 4      | VBL      | Power Supply +24.0V                               | VBL          | VBL        |                                       |
| 5      | VBL      | Power Supply +24.0V                               | VBL          | VBL        |                                       |
| 6      | GND      | Backlight Ground                                  | GND          | GND        |                                       |
| 7      | GND      | Backlight Ground                                  | GND          | GND        |                                       |
| 8      | GND      | Backlight Ground                                  | GND          | GND        | 1                                     |
| 9      | GND      | Backlight Ground                                  | GND          | GND        |                                       |
| 10     | GND      | Backlight Ground                                  | GND          | GND        |                                       |
| 11     | Boost    | DC(0.0V ~ 3.3V) input                             | Boost        | Don't care | 2                                     |
| 12     | VON/OFF  | 0.0V ~ 5.0V                                       | On/Off       | Don't care | 3, Open/High for B/L<br>on as default |
| 13     | EXTVBR-B | PWM signal (0.0V ~ 3.3V) input                    | External PWM | -          | 4                                     |
| 14     | Status   | Normal : Under 0.7V<br>Abnormal : External Pullup | Status       | -          |                                       |

Notes: 1. GND should be connected to the LCD module's metal frame.

- 2. Minimum Brightness: Boost = 0.0V Maximum Brightness: Boost = 3.3V "OPEN": Boost = 1.65V
- 3. Rising Edge: Lamp "ON" / Falling Edge: Lamp "OFF"
- 4. Pin#13 can be opened. (if Pin #13 is open, EXTVBR-B is 100%)
- 5. Each impedance of pin #11, 12 and 13 is  $180[K\Omega]$ ,  $80[K\Omega]$  and  $5[M\Omega]$ .

#### 3-3. Signal Timing Specifications

This is the signal timing required at the input of the LVDS transmitter. All of the interface signal timing should be satisfied with the following specifications for it's proper operation.

Table 8. Timing Table

|         | ITEM          | SYMBOL                           | Min. | Тур. | Max. | Unit  | Note               |
|---------|---------------|----------------------------------|------|------|------|-------|--------------------|
| Clock   | Period        | t <sub>CLK</sub>                 | 12.2 | 13.8 | 14.7 | ns    |                    |
| CIOCK   | Frequency     | f <sub>CLK</sub>                 | 68   | 72.3 | 82   | MHz   |                    |
|         | Frequency     | f <sub>H</sub>                   | 45   | 47.4 | 53   | KHZ   | 3                  |

|         | Frequency     | $f_V$                            | 47   | 60   | 66   | HZ    | 3                  |
| \/      | Display Valid | t <sub>vv</sub>                  | 768  | 768  | 768  | Lines | PAL:               |
| Vsync   | Blank         | t <sub>VT</sub> -t <sub>VV</sub> | 7    | 22   | 295  | Lines | 47~53Hz,<br>NTSC : |
|         | Total         | t <sub>VT</sub>                  | 775  | 790  | 1063 | Lines | 57~66Hz            |

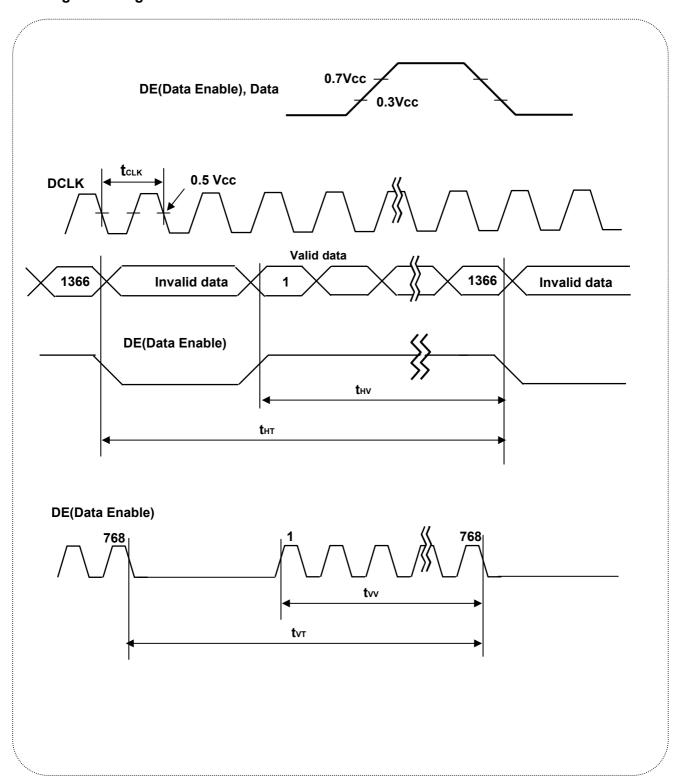

#### Notes:

- 1. The performance of the electro-optical characteristics are may be influenced by variance of the vertical refresh rates.
- 2. Above timing table is only valid for DE Mode.
- 3. H sync ,V sync don't care.( for only DE Mode)

Ver. 1.0 Aug.7, 2007 12 / 32

# 3-4. Signal Timing Waveforms

#### 3-5. Color Input Data Reference

The brightness of each primary color (red,green and blue) is based on the 8-bit gray scale data input for the color; the higher the binary input, the brighter the color.

The table below provides a reference for color versus data input.

Table 9. Color Data Reference

|                |   |                            |                                 |                       |                            |                            |                                 |                                 |                                 |                            | In                         | put                        | Сс                         | lor                        | Da                         | ta                         |                                 |                            |                            |                            |                            |                            |                            |                            |                                 |

#### 3-6. Power Sequence

#### 3-6-1. Sequence for LCD Module

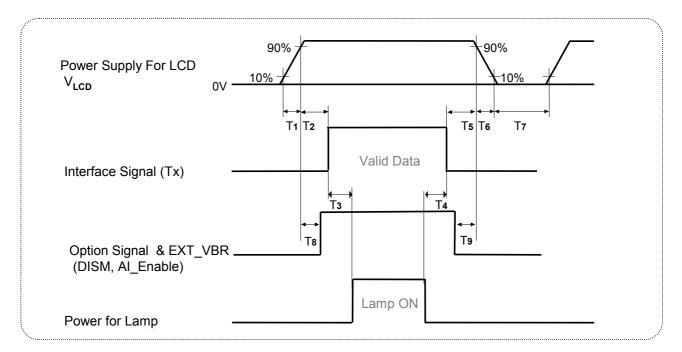

Table 10. Power Sequence for LCM

| Doromotor |      | Value       |     | l lmit |
|-----------|------|-------------|-----|--------|
| Parameter | Min  | Тур         | Max | Unit   |
| T1        | 0.01 | -           | 20  | ms     |
| T2        | 0.01 | -           | 50  | ms     |
| Т3        | 200  | -           | -   | ms     |
| T4        | 200  | -           | -   | ms     |
| T5        | 0.01 | -           | 50  | ms     |
| Т6        | -    | -           | -   | ms     |
| Т7        | 2.0  | -           | -   | s      |
| Т8        |      | ms          |     |        |
| Т9        |      | 0 < T9 < T5 |     | ms     |

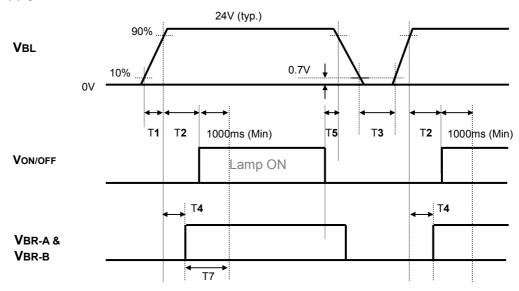

Notes: 1. Please avoid floating state of interface signal at invalid period.

- 2. When the interface signal is invalid, be sure to pull down the power supply  $V_{LCD}$  to 0V.
- 3. The case when the T2/T5 exceed maximum specification, it operates protection pattern(Black pattern) till valid signal inputted. There is no reliability problem.
- 4. The T3/T4 is recommended value, the case when failed to meet a minimum specification, abnormal display would be shown. There is no reliability problem.

#### 3-6-2. Sequence for Inverter

#### **Power Supply For Inverter**

#### 3-6-3. Deep condition for Inverter

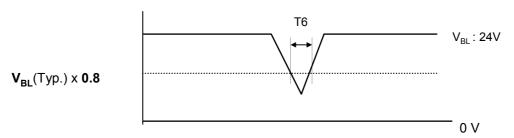

Table 12. Power Sequence for Inverter

| Parameter |      | Values |     | Units  | Remarks                                   |
|-----------|------|--------|-----|--------|---|
| Parameter | Min  | Тур    | Max | Ullits | Remarks                                   |
| T1        | 20   | -      | -   | ms     | 1   |
| T2        | 500  | -      | -   | ms     |   |
| T3        | 200  | -      | -   | ms     |   |
| T4        | 0    |        | -   | ms     | 2   |
| T5        | 10   | -      | -   | ms     |   |
| T6        | -    | -      | 10  | ms     | <b>V</b> <sub>BL</sub> (Typ) x <b>0.8</b> |
| T7        | 1000 | -      | -   | ms     | 3   |

Notes: 1. T1 describes rising time of 0V to 24V and this parameter does not applied at restarting time.

- 2. T4(max) is less than T2.
- 3. In T7 section, VBR-B is recommended 3.3V.

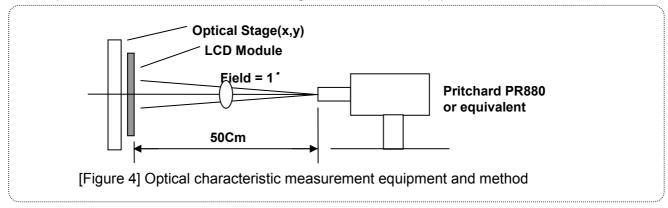

Ver. 1.0 Aug.7, 2007 16 / 32

## 4. Optical Specification

Optical characteristics are determined after the unit has been 'ON' for 30Min in a dark environment at  $25\pm2\,$ °C. The values specified are at an approximate distance 50cm from the LCD surface at a viewing angle of  $\Phi$  and  $\theta$  equal to 0 °.

FIG. 4 presents additional information concerning the measurement equipment and method.

 $\textbf{Table 12. Optical characteristics} \quad \textbf{(Ta=25\pm2\%, V}_{\texttt{LCD}} \textbf{=12V, f}_{\texttt{V}} \textbf{=60Hz, CLK=72.3MHz, Vbr-A = 1.65, Vbr-B=3.3V, DCR Disable)} \\$

#### Note:

1. Contrast ratio(CR) is defined mathematically as :

It is measured at center point(1)

- Surface luminance(L<sub>WH)</sub> is luminance value at center point (P1) across the LCD surface 50cm from the surface with all pixels displaying white.
   For more information see FIG 5.
- 3. The variation in surface luminance ,  $\delta_{\,\text{WHITE}}$  is defined as

$$\delta$$
 WHITE = Maximum (P1,P2, ....,P5) / Minimum (P1,P2, ....,P5)

For more information see [ Figure 5 ].

Figure 5. Luminance measuring point

Ver. 1.0 Aug.7, 2007 18 / 32

4. Response time is defined as the following figure and shall be measured by switching the input signal for "Gray(N)" and "Gray(M)".

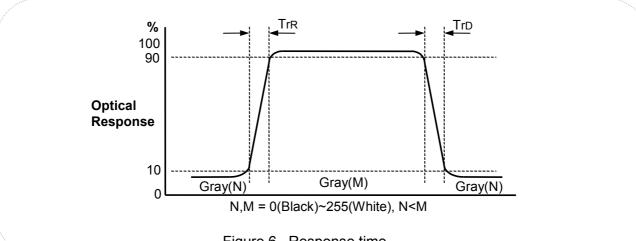

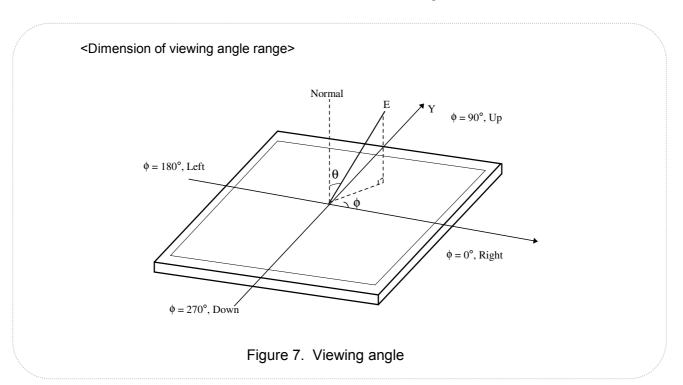

Figure 6. Response time

5. Viewing angle is the angle at which the contrast ratio is greater than 10. The angles are determined for the horizontal or x axis and the vertical or y axis with respect to the z axis which is normal to the LCD surface. For more information see Figure 7.

#### 6. Gray scale specification

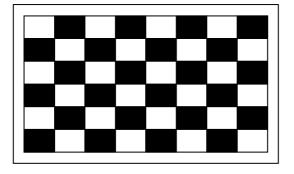

Table 13. Gray scale

| Occurs and | ι    | uminance [%] Without DCl | २    |  |  |
|------------|------|--------------------------|------|--|--|
| Gray Level | Min. | Тур.                     | Max. |  |  |
| L0         | 0    | 0.12                     | 0.15 |  |  |
| L15        | 0    | 0.27                     | 1.4  |  |  |
| L31        | 0    | 1.00                     | 2.7  |  |  |

| L127       | 11.8 | 21.6                     | 32.9 |  |  |
| L143       | 16.3 | 28.0                     | 42   |  |  |
| L159       | 22   | 35.4                     | 50.5 |  |  |
| L175       | 29.7 | 43.7                     | 59.7 |  |  |
| L191       | 39.4 | 53.0                     | 69.5 |  |  |
| L207       | 48.8 | 63.2                     | 80.3 |  |  |
| L223       | 61.5 | 74.5                     | 90.6 |  |  |
| L239       | 76.9 | 88.0                     | 96.6 |  |  |
| L255       | 100  | 100                      | 100  |  |  |

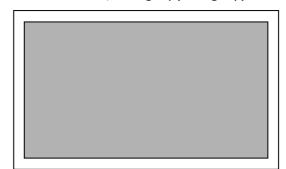

#### 7. Image sticking

When it changes into pattern-B after a 1-hour drive by pattern-A, it disappears within 10 minutes.

<Pattern-A, Chess board (8x6)>

<Pattern-B, Mid-gray(127 gray)>

#### 5. Mechanical Characteristics

Table 14. provides general mechanical characteristics for the model LC260WX2. In addition, the figures in the next page are detailed mechanical drawing of the LCD.

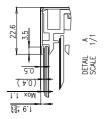

Table 14. Mechanical characteristics

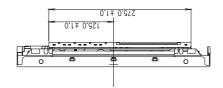

|                     | Horizontal                                 | 626 mm      |  |  |
|---------------------|--|-------------|--|--|
| Outline Dimension   | Vertical                                   | 373 mm      |  |  |
|                     | Depth                                      | 47.1 mm     |  |  |
| Bezel Area          | Horizontal                                 | 580.8mm     |  |  |
| Dezei Alea          | Vertical                                   | 328.8mm     |  |  |
| Active Diapley Area | Horizontal                                 | 575.769 mm  |  |  |
| Active Display Area | Vertical                                   | 323.712 mm  |  |  |
| Weight              | 4,300 (Typ.), 4,50                         | 00 g (Max.) |  |  |
| Surface Treatment   | Hard coating<br>Anti-glare treatment of th |             |  |  |

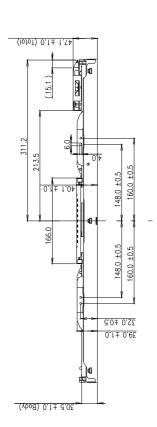

Note: Please refer to a mechanic drawing in terms of tolerance at the next page.

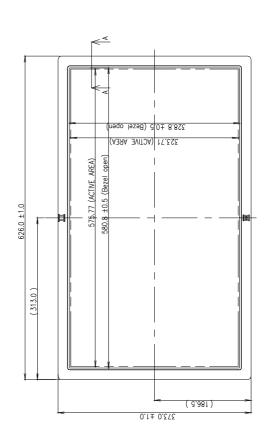

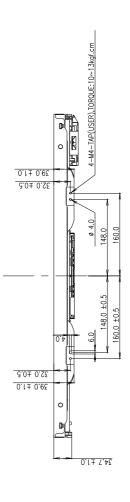

#### <FRONT VIEW>

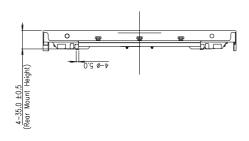

# 6. Reliability

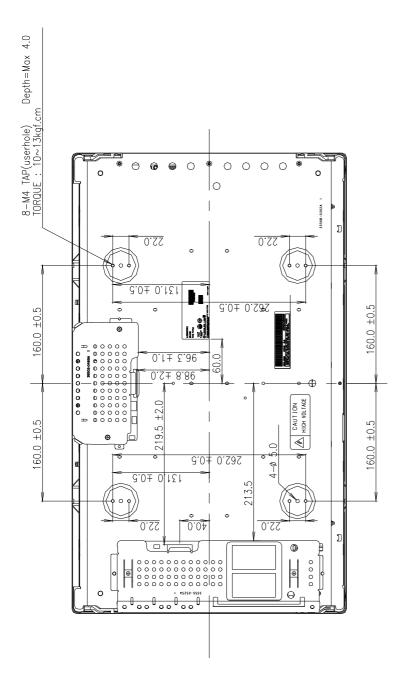

Table 15. ENVIRONMENT TEST CONDITION

| No | Test Item                         | Condition  |
|----|-----------------------------------|--|
| 1  | High temperature storage test     | 60℃, 500h  |
| 2  | Low temperature storage test      | -20℃, 500h   |
| 3  | High temperature operation test   | 50℃, 80%RH, 500h<br>60℃, 500h (2000h)  |
| 4  | Low temperature operation test    | 0℃, 500h (1000h)   |
| 5  | Heat cycle test                   | -20℃ ~ 60℃,<br>30min/5min/30min, 100cycles   |
| 6  | Soldering heat cycle test         | -40℃ ~ 80℃,<br>30min/5min/30min, 200cycles   |
| 7  | Vibration test<br>(non-operating) | Wave form: random Vibration level: 1.0Grms Bandwidth: 10-500Hz Duration: X,Y,Z, 10 min One time each direction |
| 8  | Shock test<br>(non-operating)     | Shock level: 100G Waveform: half sine wave, 2ms Direction: $\pm X$ , $\pm Y$ , $\pm Z$ One time each direction |
| 9  | ESD test                          | Condition: $150 \text{pF}$ , $330 \text{ ohm}$ Case, air Evaluation: $\pm 15 \text{kV}$                        |
| 10 | Humidity Storage test             | Ta= 40 ℃ ,70%RH(240hr)   |

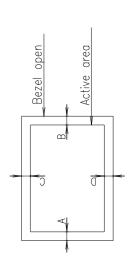

Note: After Reliability Test, display function should be kept as the result evaluation.

#### <REAR VIEW>

Unspecified tolerances are to be ±0.5mm.
 This drawing is only preliminary data and can be changed without notice.
 Tilt and partial disposition tolerance of display area is as following.
 X-Direction: IA-BI ≤ 1.5mm
 Y-Direction: IC-DI ≤ 1.5mm

#### 7. International Standards

#### 7-1. Safety

- a) UL 60950-1:2003, First Edition, Underwriters Laboratories, Inc.,
- Standard for Safety of Information Technology Equipment.
- b) CAN/CSA C22.2, No. 60950-1-03 1<sup>st</sup> Ed. April 1, 2003, Canadian Standards Association, Standard for Safety of Information Technology Equipment.
- c) EN 60950-1:2001, First Edition,
  - European Committee for Electrotechnical Standardization(CENELEC)
- European Standard for Safety of Information Technology Equipment.

#### 7-2. EMC

- a) ANSI C63.4 "Methods of Measurement of Radio-Noise Emissions from Low-Voltage Electrical and Electrical Equipment in the Range of 9kHZ to 40GHz." American National Standards Institute(ANSI), 1992
- b) C.I.S.P.R. "Limits and Methods of Measurement of Radio Interface Characteristics of Information Technology Equipment." International Special Committee on Radio Interference.
- c) EN 55022 "Limits and Methods of Measurement of Radio Interface Characteristics of Information Technology Equipment."

European Committee for Electrotechnical Standardization.(CENELEC), 1998(Including A1: 2000)

#### 8. Packing

#### 8-1. Designation of Lot Mark

a) Lot Mark

#### b) Location of Lot Mark

Serial No. is printed on the label. The label is attached to the backside of the LCD module. This is subject to change without prior notice.

#### 8-2. Packing Form

a) Package quantity in one box :6 pcs

b) Box size: 752mm(W) X 506mm(D) X 458mm(H)

Ver. 1.0 Aug.7, 2007 26 / 32

#### 9. Precautions

Please pay attention to the followings when you use this TFT LCD module.

#### 9-1. Mounting Precautions

- (1) You must mount a module using holes arranged in four corners or four sides.
- (2) You should consider the mounting structure so that uneven force (ex. Twisted stress) is not applied to the module. And the case on which a module is mounted should have sufficient strength so that external force is not transmitted directly to the module.
- (3) Please attach the surface transparent protective plate to the surface in order to protect the polarizer. Transparent protective plate should have sufficient strength in order to the resist external force.
- (4) You should adopt radiation structure to satisfy the temperature specification.
- (5) Acetic acid type and chlorine type materials for the cover case are not desirable because the former generates corrosive gas of attacking the polarizer at high temperature and the latter causes circuit break by electro-chemical reaction.
- (6) Do not touch, push or rub the exposed polarizers with glass, tweezers or anything harder than HB pencil lead. And please do not rub with dust clothes with chemical treatment. Do not touch the surface of polarizer for bare hand or greasy cloth.(Some cosmetics are detrimental to the polarizer.)
- (7) When the surface becomes dusty, please wipe gently with absorbent cotton or other soft materials like chamois soaks with petroleum benzine. Normal-hexane is recommended for cleaning the adhesives used to attach front / rear polarizers. Do not use acetone, toluene and alcohol because they cause chemical damage to the polarizer.
- (8) Wipe off saliva or water drops as soon as possible. Their long time contact with polarizer causes deformations and color fading.
- (9) Do not open the case because inside circuits do not have sufficient strength.

#### 9-2. Operating Precautions

- (1) The spike noise causes the mis-operation of circuits. It should be lower than following voltage: V=± 200mV(Over and under shoot voltage)
- (2) Response time depends on the temperature.(In lower temperature, it becomes longer.)
- (3) Brightness depends on the temperature. (In lower temperature, it becomes lower.) And in lower temperature, response time(required time that brightness is stable after turned on) becomes longer.
- (4) Be careful for condensation at sudden temperature change. Condensation makes damage to polarizer or electrical contacted parts. And after fading condensation, smear or spot will occur.
- (5) When fixed patterns are displayed for a long time, remnant image is likely to occur.
- (6) Module has high frequency circuits. Sufficient suppression to the electromagnetic interference shall be done by system manufacturers. Grounding and shielding methods may be important to minimized the interference.
- (7) Please do not give any mechanical and/or acoustical impact to LCM. Otherwise, LCM can't be operated its full characteristics perfectly.
- (8) A screw which is fastened up the steels should be a machine screw. (if not, it causes metallic foreign material and deal LCM a fatal blow)
- (9) Please do not set LCD on its edge.

#### 9-3. Electrostatic Discharge Control

Since a module is composed of electronic circuits, it is not strong to electrostatic discharge. Make certain that treatment persons are connected to ground through wrist band etc. And don't touch interface pin directly.

#### 9-4. Precautions for Strong Light Exposure

Strong light exposure causes degradation of polarizer and color filter.

#### 9-5. Storage

When storing modules as spares for a long time, the following precautions are necessary.

- (1) Store them in a dark place. Do not expose the module to sunlight or fluorescent light. Keep the temperature between 5 ℃ and 35 ℃ at normal humidity.
- (2) The polarizer surface should not come in contact with any other object.

  It is recommended that they be stored in the container in which they were shipped.

#### 9-6. Handling Precautions for Protection Film

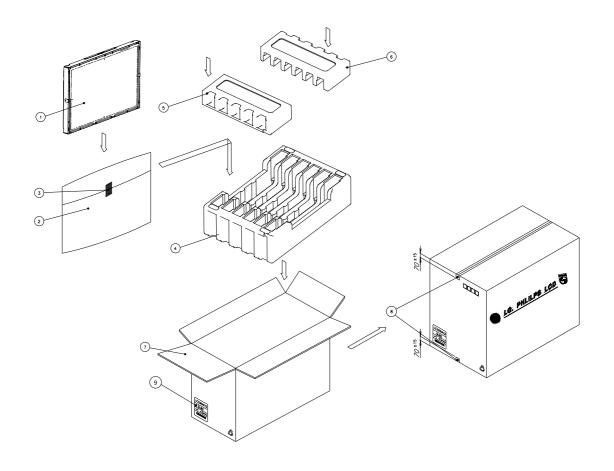

- (1) The protection film is attached to the bezel with a small masking tape. When the protection film is peeled off, static electricity is generated between the film and polarizer. This should be peeled off slowly and carefully by people who are electrically grounded and with well ion-blown equipment or in such a condition, etc.
- (2) When the module with protection film attached is stored for a long time, sometimes there remains a very small amount of glue still on the bezel after the protection film is peeled off.
- (3) You can remove the glue easily. When the glue remains on the bezel surface or its vestige is recognized, please wipe them off with absorbent cotton waste or other soft material like chamois soaked with normal-hexane.
