## 1 Applicable TFT-LCD module

This specification applies to the color TFT-LCD module, LQ057V3DG01.

## 2 Overview

This module is a color active matrix transmissive LCD module incorporating amorphous silicon TFT (Thin Film Transistor).

It is composed of a color TFT-LCD panel, driver ICs, control circuits and power supply circuitry and a backlight unit. Graphics and texts can be displayed on a 640 x RGB x 480 dots panel with 262,144 colors by feeding 18 bit data signal (6bit/each of R,G,B), 4(four) timing signals, +3.3V DC power supply for TFT-LCD and AC power supply for backlight.

(Note: Backlight-driving DC/AC inverter is not built in this module.)

- Fine images with stripe aligned 307,200 pixels on 5.7 inch diagonal screen
- Color display capability of 262,144 colors with 18 bit data signal(6 bits for each RGB)
- Adapting a wide viewing angle technology [best viewing angle: 12 o'clock direction]
- High contrast, thanks to active matrix drive system
- AG(Anti Glare) polarizing filter
- Light and slim compact module achieved by COG assemble technology(6 o'clock direction is also available by the function to flip the screen horizontally or vertically)
- Natural coloring reproducibility by employing normally-white-mode, which has good nature in coloring
- Image inversion both horizontally and vertically

25	B5	BLUE data signal(MSB)	
26	TEST1	TEST1(Please be sure to connect 26pin with ground)	
27	ENAB	Data enable signal (signal to settle the horizontal display position)	【Note 1】
28	Vcc	+3.3V power supply	
29	Vcc	(Supply same voltage to 28 and 29 pin )	
30	R/L	Selection signal for horizontal scanning direction ("L" : Normally , "H" : Right-and-Left reversal)	【Note 2】
31	U/D	Selection signal for vertical scanning direction ("H" : Normally , "L" : Up-and-Down reversal)	【Note 2】
32	TEST2	TEST2(to be fixed to "High")	
33	TEST3	TEST3(Please be sure to connect 33pin with ground)	

The back shield case is internally grounded to GND of the module.

The front shield case is not certainly grounded to GND of the module.

#### 【Note 1】

The horizontal display location is designated and controlled by rising timing of ENAB signal.

However if ENAB signal is fixed to "Low", display location is designated by the default setting in the module.

(Don't use the module by fixing ENAB to "High") .....See: Chapter 7-2

Lamp life time	LL	-	50,000	-	hour	[Note6-2]

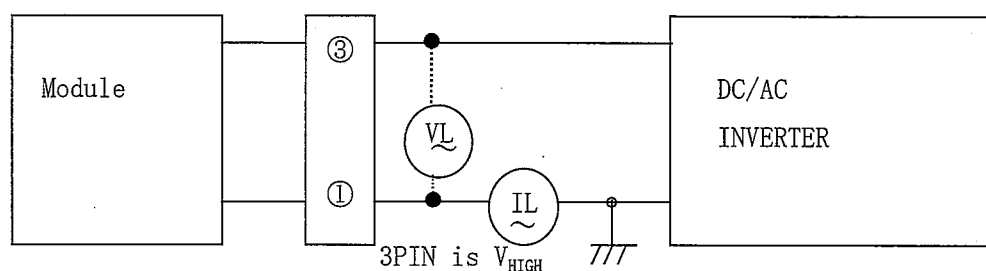

(Inverter: HARISON TOSHIBA LIGHTING CORPORATION Type HIU-288(22pF) is used )

Caution: Use Inverter providing symmetrical sine-wave in positive/negative polarity with no spike.

[Note6-1] Connect Module's metal shield case to GND of inverter circuit.

A piece of lamp current is 5mA rms.

Lamp current is measured with current meter for high frequency as shown below.

[Note6-2] The data for lamp is for your reference, because lamp is consumable component.

- a) Lamp life time is defined by either 1 or 2 below. (Continuous turning on at Ta=25°C, IL=5mA rms)
- ① When a brightness of lamp surface became 50% of the initial value under the standard condition.
  - ② When a kick-off voltage in Ta= -30°C exceeded maximum value (1490 Vrms) at the output of inverter circuitry
- b) In case of operating under lower temp. environment, the lamp exhaustion is accelerated and the brightness becomes lower.
- (Continuous operating for around 1 month under lower temp. condition may reduce the brightness to half of the original brightness.)
- In case of such usage under lower temp. environment, periodical lampexchange is recommended

## 7 Timing Characteristics of Input Signals

Timing diagrams of input signal are shown in Fig.2.

### 7.1 Timing Characteristics

Parameter	Symbol	Min.	Typ.	Max.	Unit	Note	
Clock	Frequency	1/Tc	24.3	25.2	26.1	MHz

Vertical front porch	TVf	6	—	16	—	TV-TV <sub>s</sub> -TV <sub>d</sub>	
Vertical display period	TVd	—	480	—	line		

Note) In case of lower frequency, the deterioration of display quality, flicker etc., may occur.

### 7.2 Display Position in horizontal direction

Display position in horizontal direction is designated by rising timing of ENAB signal.

Parameter	Symbol	MIN	TYP	MAX	Unit	Note
ENAB signal	Setup time	Tes	5	—	Tc-10	ns
	Pulse width	Tep	—	640	—	clock
Phase difference between Hsync and ENAB signal	THe	44	—	104	clock	

When ENAB is fixed to “Low”, the horizontal display will start from the clock C104 (clock) as shown in Fig.2.

### 7.3 Display position in vertical direction

Display start position in vertical direction TV<sub>s</sub> is fixed to the 34th line.

		y		0.279	0.329	0.379	-	
Luminance		Y		-	400	-	cd/m <sup>2</sup>	

Lamp test in the module is made with the inverter type HIU-288(22pF) at 50kHz

The optical specifications are measured 30 minute after turning lamp on and in a dark room or equivalent condition, according to the method shown in Fig.9-1, 2 below.

Fig.9-1 Measuring setup for  
Viewing angle and Contrast  
(BM-5A is used for contrast.)

Fig.9-2 Measuring setup for  
Luminance, Chromaticity  
and Response time  
(BM-7 is used for Luminance, SR-1 is for response)

[Note9-1] Definitions of viewing angle range:

The best viewing angle of this module is slightly leaned to 12 o'clock from normal line.

Where  $\theta_{11} > \theta_{max}$ , gray scale is reversed partially.

Where  $\theta_{11} < \theta_{max}$ , or in  $\theta_{12}$  direction, gray scale isn't reversed.

[Note9-2] Definition of contrast ratio:

The contrast ratio is defined as the following.

$$\text{Contrast Ratio (CR)} = \frac{\text{Luminance (brightness) with all pixels white}}{\text{Luminance (brightness) with all pixels black}}$$

[Note9-3] Definition of response time:

The response time is defined as the following figure and shall be measured by switching the input signal between "black" and "white" alternatively.

[Note9-4] This parameter should be measured at the center of the screen and 30 minutes after turn-on.

Inverter frequency: 50 kHz

The characteristics are measured when the driver circuit is not powered.

## 10 Display Qualities

Please refer to the Outgoing Inspection Standard.

## 11 Handling Instruction

### 11.1 Assembling the module

- 1) The TFT-LCD module is designed to be mounted on equipment using the mounting tabs in the four corners of the module at the rear side. On mounting the module, as the nominal diameter 3.0mm tapping screw (fastening torque is 0.25 through 0.30 N·m) is recommended, be sure to fix the module on the same plane, taking care not to wrap or twist the module. The depth of tapping screw embedded into LCD module must be less than 5mm.  
The pressing module, (ex. touching switch etc.) causes disordered image. So taking care for pressure not to conduct directly to LCD module.
- 2) Please power off the module before you connect or disconnect input connector..
- 3) Make sure to connect module's metal shield case to GND of inverter circuit.  
If its connection is not made perfectly, some of the following problems may occur.
  - a) The noise from the backlight unit will increase.
  - b) The output from inverter circuit will be unstable.
  - c) In some cases, a part of module will heat up.

### 11.2 Precautions in mounting

- 1) Polarizer which is made of soft material and susceptible to flaw must be handled carefully.
- 2) Method of removing dust from polarizer.
  - Blow off dust with N2 blower for which static electricity preventive measure has been taken.
  - Since the polarizer is easily damaged, wiping should be avoided. If the panel has stain or finger grease, we recommend to use adhesive tape to softly remove them from the panel.  
Inevitable, wipe off by cleaning cloth for a lens with carefully, breathing on it.
- 3) When metal part of the TFT-LCD module (shielding lid and rear case) is soiled, wipe it with soft dry cloth. For stubborn dirties, wipe the part, breathing on it.
- 4) Wipe off water drop or finger grease immediately. Long contact with water may cause discoloration or spots.
- 5) TFT-LCD module uses glass which breaks or cracks easily if dropped or bumped on hard surface handle with care.
- 6) Since CMOS LSIs are incorporated in this module, take care of electrostatic and earth human body while handling.

### 11.3 Caution in product design

The notes and cautions below should be followed when product is designed with this module.

The module should be protected with cover to prevent salt content and/or water droplet.

Take enough shielding countermeasure not to interfere to peripheral electronic device.

### 11.4 Others

The LCD has the nature that its performance is degradation by ultra-violet light. Don't leave the LCD module in direct sunlight or strong ultra violet ray.

If stored at the temperatures lower than the rated storage temperature, the LC may freeze and it may cause LCD panel damage. If storage temperature exceeds the specified rating, the molecular orientation of the LC may change to that of a liquid, and they may not revert to their original state. Store the module in normal room temperature.

The inductive loss caused by routing of lamp lead wire, which is closed to conductive section, may require the kick-off voltage greater than specified kick-off voltage.

The liquid crystal may leak out when the LCD is broken. If the liquid crystal drip into the eyes or mouth washes it out immediately.

The caution to other ordinal electronic component should be followed also.

## 12 Reliability Test Items

No.	Test parameter	Conditions
1	High temperature storage test	Leaves the module at Ta=80°C for 240h
2	Low temperature storage test	Leaves the module at Ta=-30°C for 240h
3	High temperature & high humidity operation test	Operates the module at Ta=40°C; 90~95%RH for 240h (No condensation)
4	High temperature operation test	Operates the module with +80°C at panel surface for 240h
5	Low temperature operation test	Operates the module at Ta=-30°C for 240h
6	Strength against ESD	±200V·200pF [0Ω] one time for each terminal
7	Shock test (non- operating)	Max. acceleration : 980m/s <sup>2</sup> Pulse width : 6ms, half sine wave Direction : ±X,±Y,±Z once for each direction.
8	Vibration test (non- operating)	Frequency : 10~57Hz/Vibration width (one side):0.15mm : 58~500Hz/ acceleration:19.6m/s <sup>2</sup> Sweep time : 6 minutes Test period : 3 hours (1 hour for each direction of X,Y,Z)
9	Thermal shock test	-30°C ~ +80°C /50 cycle [0.5h] [0.5h]

## [Result Evaluation Criteria]

Under the display quality test conditions with normal operation state, these shall be no change which may affect practical display function.

[Note] The directions of X, Y, Z are defined as below:
